What error message did you encounter (if any)?

```
Enter an integer: 12
Exception in thread "main" java.lang.Error:
Unresolved compilation problem:
	Syntax error on token "==", invalid
AssignmentOperator
	at
mastery.DigitExtractor$Num.<init>(DigitExtracto
r.java:11)
	at
mastery.DigitExtractor.main(DigitExtractor.java:
36)
```

.

What unexpected behavior did your program exhibit?
It asked for integer; however, it did not work past that
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
I started adding two equals signs to everything as i thought ot was common practice but thats not how it works

Include a screenshot of specific lines of code.

```
public static class Num {
    private int number;
    // Define Whole, Ones, Tens and Hundreds
    public Num(int number) {
        this.number == number;
    }
```

How did you fix the issue?
You have to add only one equal sign.

Correct lines of code screenshot

```
public static class Num {
    private int number;
    // Define Whole, Ones, Tens and Hundreds
    public Num(int number) {
        this.number = number;
    }

    public int getWhole() {
        return number;
    }

    public int getOnes() {
        return Math.abs(number) % 10;
    }

    public int getTens() {
        return (Math.abs(number) / 10) % 10;
    }

    public int getHundreds() {
        return (Math.abs(number) / 100) % 10;
    }
}
```
