Reflection Log for House

How did you approach understanding the challenge?
I have already had experience with methods, and the instructions were fairly straightforward. So, I decided to pick this one. I knew that this one did not involve the user inputting anything, and the program would do its job.
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
Not exactly; I did find it fairly straightforward as its just using methods to print a house.

Did you create a plan or break the problem into smaller steps before coding?
I broke the code into smaller chunks. I do that consistently now
How did you decide on the tools, data structures, or algorithms to use?
I knew I had to use methods, as it's chapter six and explicitly mentioned the names on the exercise in the textbook. I also have to print quite a bit.

Did you write the code in small pieces or attempt the entire solution at once?
I broke the code into smaller pieces instead of attempting it all at once, it is good practice.

How did you test your solution along the way to make sure it was working?
Every couple of lines, I kept testing it to see if it would work. And if i moved on to a different stage of the code i tested it
---

What part of the problem was the most difficult for you?
You had to put “\\” because putting only “\” marks the end of the code, as “\” usually marks the end of a line

How did you handle moments when you felt stuck or unsure of what to do next?
Asked AI or searched if it was just a small question.

Was there anything you learned that you think will help you with future challenges?
Not much; I knew what to do, and that was it.
