

Reflection Log for Investment

How did you approach understanding the challenge?

This is similar to our NumbersSum skill builder. So I chose this one.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I was wondering what I would've put in the for loop; I looked at NumSum and i searched it up after a while

Did you create a plan or break the problem into smaller steps before coding?

I broke the problem into smaller steps. This is routine with me now.

How did you decide on the tools, data structures, or algorithms to use?

I knew I had to use Scanner as I needed a digit from the user. I knew this digit would be stored as an integer and the sum would also be an integer, as they are adding whole numbers together. I knew I had to use int.

Did you write the code in small pieces or attempt the entire solution at once?

I wrote the code in smaller pieces

How did you test your solution along the way to make sure it was working?

I kept running every couple of lines or when I changed the stage of the code

What part of the problem was the most difficult for you?

For the "for" loop, I was wondering what I would put in the brackets, as it would be slightly different from the numbersum skillbuilder.

How did you handle moments when you felt stuck or unsure of what to do next?

I kept trying, and if it did not get better, I asked peers. If they did not know, I searched it.

Was there anything you learned that you think will help you with future challenges?

How to write within the brackets of a for or while loop.
