

What error message did you encounter (if any)?

The Monthly payment is \$Exception in thread "main"

What unexpected behavior did your program exhibit?

Large Amounts of decimals and code breaking after the interest rate

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

Formatted incorrectly and used + to format, not a comma

Include a screenshot of specific lines of code.

```
// Formula for Car Payment  
CarPaymentFormula = (PrincipalOwning *(InterestRate/12)/(1 -(1 +InterestRate/12)^MonthlyPayment));
```

```
System.out.print("Principal: ");  
PrincipalOwning = userInput.nextInt();
```

```
System.out.print("Interest Rate: ");  
InterestRate = userInput.nextInt();
```

```
System.out.print("Number of Monthly Payments: ");  
MonthlyPayment = userInput.nextInt();
```

```
Principal: 20000  
Interest Rate: 0.06  
Number of Monthly Payments: 48  
The monthly payment is: $469.7005809587213
```

```
<terminated> CarPayment [Java Application] C:\Program Files\Eclipse\eclipse\plugins\org.eclipse.justj.openjdk.hotspot.jre.full\jre\bin\javaw.exe (Sep 28, 2020, 9:44:27 AM - 9:44:37 AM elapsed: 10)  
Principal: 20000  
Interest Rate: 0.06  
Number of Monthly Payments: 48  
The monthly payment is: $Exception in thread "main" java.util.MissingFormatArgumentException: Format specifier '%.2f'  
    at java.base/java.util.Formatter.format(Formatter.java:2790)  
    at java.base/java.io.PrintStream.implFormat(PrintStream.java:1367)  
    at java.base/java.io.PrintStream.format(PrintStream.java:1346)  
    at java.base/java.io.PrintStream.printf(PrintStream.java:1245)  
    at mastery.CarPayment.main(CarPayment.java:32)
```

How did you fix the issue?

Changed nextInt() to nextDouble();

Added `%.2f%n` to fix the format

Also changed + CarPaymentFormula to ", CarPaymentFormula"

Correct lines of code screenshot

```
// Ask User for Principal Owning, Interest Rate, Number of Monthly Payments
System.out.print("Principal: ");
PrincipalOwning = userInput.nextDouble();

System.out.print("Interest Rate: ");
InterestRate = userInput.nextDouble();

System.out.print("Number of Monthly Payments: ");
MonthlyPayment = userInput.nextInt();

//Print Monthly Payment
System.out.printf("The monthly payment is: $%.2f%n", CarPaymentFormula);
```
